

Technology allows unit to recognize room occupancy

PANASONIC HEATING AND AIR CONDITIONING GROUP combines two innovations in the Exteriores E collection: its Inverter Technology that provides optimum power control and an efficient operation, and Econavi Technology – human detection technology – that creates air optimization based on room conditions and occupancy. An added accessory – the company’s Internet Control Adaptor – completes the unit with Wi-Fi, allowing homeowners to set a desired room temperature from a smartphone or Web browser.

Single post function as inline, corner or end

DURARAIL introduces the “new generation” of the Panorama Post system with its Panorama Universal Post, which utilizes a single, multifunctional post. A triple-channel design enables a single post to function as an inline, corner or end post, providing the versatility to adjust glass height and angles. Available in nine standard colors and up to 180 custom colors, the post is 2½ in. by 2½ in., and the system has the option to have a top rail added.

Brick veneer reflects repurposing design trend

The Ashland TundraBrick from **ELDORADO STONE** emulates the shades of gray represented in weathered brick. Cast from molds of European bricks reclaimed from centuries-old dwellings, the brick veneer collection offers the texture and appearance of timeworn and classic buildings, and this additional color offering balances a modern gray palette with classic design elements. At 1-in.-thick, the brick veneer can be used in indoor and outdoor applications.
